

Assignment 2 - Code Review

Author: Shabbir Hussain

Reviewer: Jashangeet Singh

General Comments:

1. The code is very well written and very neatly organized. Therefore it is quite easy to follow.
2. There is a very interesting algorithm to find the k-neighborhood score.
3. Due to the efficient algorithm, the author is able to keep the number of read operations required down to 2.

Minor Problem:

This implementation uses the default input format. Therefore the read only happens on a per line basis. So, the neighbors for each word are only the words within it's own line. This seems intentional and due to the interpretation of the word "neighbor".
